

# Appeon® 6.5 for PowerBuilder®

— *Bringing the Power of PB to the Web*

Appeon 6.5 for PowerBuilder is the most powerful and flexible version to date. It enables you to develop and deploy extremely complex PowerBuilder applications to both .NET and Java platforms. There is no easier or faster approach to develop robust user-friendly business applications.

## Enhanced PowerBuilder Support

- Supports PowerBuilder 12 Classic.
- Web Services can be used as the data source for DataWindows.
- DataWindows can be saved in various formats, including PDFs and images (JPEG/GIF/BMP).
- BYTE data type is supported and binary data can be processed as parameters.
- FileReadEx and FileWriteEx functions are supported for handling large files.
- Printer page size/width/length can be customized by defining the dimensions in the PB painter.

## Enhanced Productivity for Developers

- **Server Call Analyzer.** Every line of PowerBuilder code is analyzed automatically, helping developers instantly identify suboptimal code that may degrade performance.
- **System Configuration Import/Export.** Profiles configured in Appeon Developer Toolbar and AEM can be imported/exported to different machines, enabling the developer to replicate a particular configuration at the click of a button.
- **Compatible with QuickTest Pro (QTP).** QTP, a popular automatic functional testing tool, can be used to automate testing of Appeon Web applications, which reduces testing cycle time and maintenance cost.

## New Platform Support

- **JBoss Application Platform Support.** Your organization can take advantage of all the benefits that this most popular open source J2EE platform offers, including enterprise-level security, reliability, scalability, as well as lower cost of ownership.
- **64-bit Processing Support.** Appeon-deployed Web applications not only run on 64-bit Web browsers and Windows servers but also fully leverage the performance that 64-bit processing offers.
- **Latest Software Support.** Windows 7 OS, Microsoft IIS 7.5, Sybase ASA 12 and EAServer 6.3 are now supported.

## New Web-specific Features

- Deploying to multi-instance servers for even greater scalability.
- Clustering Appeon Server on .NET/IIS. Load balancing and failover offers a higher Web scalability and reliability.
- Calling Web services without requirement for any additional plug-ins or settings change at the client-side.
- Appeon Web Application Package now supports installing one Web application package to multiple URLs on the Web.
